OBO selection aid for foundation and ring earthers according to DIN 18014

Earthing material, for use in concrete:
- Surrounded by min. 5 cm of concrete on all sides; ≤ 2 m connect to reinforcement
- Grid width max. 20 x 20 m; with EMC protection to VDE 0185-305-4: 5 x 5 m
- Unreinforced foundation: Material no. 1.4571/1.4404, V4A

Earthing and connection material, for use in the earth, e.g. cleanliness layer:
- Material no. 1.4571/1.4404, V4A; clamps in earth with corrosion protection strip
- Min. 0.8 m deep, routing outside drainage shaft, frost apron (moist area)
- Grid: Without lightning protection: 20 x 20 m, connection between earth and concrete: Every 20 m, with lightning protection: 10 x 10 m, connection between earth and concrete: Every arrester

Material for equipotential bonding:
- 1801 VDE 1 unit 5015650 Equipotential busbar, industrial
- 1809 1 unit 5015073 Equipotential busbar, private

Foundation earther – without lightning protection
- Without lightning protection → insulating foundation

Functional equipotential bonding conductor and ring earther
- With lightning protection → insulating foundation

Insulation foundation when:
- WU concrete (white trough) for WZ<0.6, from C30/B35, (from C25/B30) → already possible
- Black/brown trough
- Completely enclosed foundation with perimeter insulation or dimpled membranes
- Additionally attached, capillary breaking, poorly electrically conductive earth strata, e.g. made of recycled materials

Foundation earther: www.obo-bettermann.com  I  Customer Service Germany Tel.: +49 (0)2373 89-1700

Start of planning

- Increased earth transition resistance e.g. through “Black trough”, “White trough”
- Completely encapsulated perimeter insulation present?

Yes
- Lightning protection measures required?

Yes
- Ring earther outside the floor plate/insulation, grid width ≤ 10 m × 10 m
  - Material V4A, material no. 1.4571/1.4404
- Functional equipotential bonding conductor within the floor plate, grid width ≤ 20 m × 20 m

No
- Ring earther outside the floor plate/insulation, grid width ≤ 20 m × 20 m
  - Material V4A, material no. 1.4571/1.4404
- At least every 20 m, a connection between the ring earthing and the functional equipotential bonding conductor. For lightning protection systems: At least one connection per down conductor

Individual foundations e.g. for structural supports present?

Yes
- Equip each foundation with a foundation earther of ≤ 2.5 m length
  - Material with at least 5 cm of concrete cover
- A connection of the foundation earther every 2 m to the reinforcement

No
- Connect the foundation earthers of all the individual foundations into a closed ring, grid width ≤ 20 m × 20 m
  - Material V4A, material no. 1.4571/1.4404
- Connection parts for connection to the main earthing rail, arrestors of a lightning protection system, connection lugs should have a length of at least 1.5 m before entering the appropriate room
  - Material permanently corrosion-protected, ideally V4A, material no. 1.4571/1.4404

Reinforced foundations present?

Yes
- Foundation earther, grid width ≤ 20 m × 20 m
  - Material with at least 5 cm of concrete cover
- Material with min. 5 cm concrete cover or made of rustproof stainless steel V4A, material no. 1.4571/1.4404

No
- Foundation earther, grid width ≤ 20 m × 20 m
  - Material V4A, material no. 1.4571/1.4404
- Measurement and documentation

Material with at least 5 cm of concrete cover

Material permanently corrosion-protected, ideally V4A, material no. 1.4571/1.4404
