Building Connections

Digitalisation, the Energiewende (energy transition), mobility – the future is gathering speed. At OBO Bettermann, we're proud to be a driving force. And as a facilitator, we make connections. Today, we are already developing the innovative electrical infrastructure systems and solutions of tomorrow. Reliably, flexibly, sustainably.

Already today, OBO is one of the leading manufacturers of installation systems for the electrical infrastructure in buildings and plants. When it comes to the friction-free flow of power, energy and data, engineers and tradespeople worldwide rely on the comprehensive range from OBO.

OBO applies its slogan "Building Connections" to around 30,000 high-quality branded electrical products and services, which are used in application solutions for projects in industry, business and infrastructure.

OBO operates a global network and employs more than 4,200 people in more than 60 countries. The headquarters of the family company, which was founded in 1911, is located in Menden, Germany. In addition, more than 40 subsidiaries are present in markets on all continents.

Improved structure, sharpened profile

Each of our products carries a benefit which only the OBO brand can offer. Products are developed, manufactured and tested with a high level of competence – from the idea through to the final check. From flawless logistics through to practical information – we can provide support at every level. We can offer additional security through certificates on the conformity of our products with the most important standards and directives. In a nutshell – OBO helps you more. In every location and in every phase of a project.

To maintain this, we continually challenge ourselves. Not as an end in itself but for the better processing of each customer's requests – fast, reliably and future-oriented. That is the reason we have not only established our three central application areas, but also reworked our catalogue structure. In this way, we can display our service offers more clearly, highlight the product benefits more effectively and illustrate the respective application areas more tangibly.

***You have a
problem?
We have the
solution!***

OBO Bettermann is more than the sum of its products. In any situation, we are the reliable partner right by your side. You have a problem? We have the solution!

It doesn't matter in which area of industry our support is needed – from industrial and plant engineering to private, public and administrative buildings, as well as in the areas of mobility and renewable energies – we have everything that you need.

OBO can not only provide the entire electro-technical infrastructure with the best possible products. We can also support you with sound expert knowledge and more than 100 years of experience, right from the planning phase through to the realisation of your projects. OBO – solutions you can rely on.

What is OBO Support?

Every OBO product carries a plus inside it, which only a branded product can offer. It is developed, manufactured and tested with a high level of competence, from the idea right through to the final check. In addition, our specialists are available for consultation and can offer you assistance and training courses for products at any time.

Together with you, we plan your project and help you choose the right products, and are also available to you at any time should you need us. From flawless logistics through to practical information – we can provide support at every level. We can offer security through certificates on the conformity of our products with the most important standards and directives.

We are as flexible as you are – because we know how practical people work and what is important to them. Each step is a plus – that is the OBO Support concept.

Service

Service – OBO can help

Everywhere and in every project phase:

- Highly competent hotline
- Product and system information, digitally or printed
- Selection and planning aids on the web, as an app, as a CAD application or in printed form
- 2D and 3D product data for planning
- Field service, branch offices and subsidiaries in 60 countries
- Engineering services for major projects

Training courses from OBO

- Seminars and workshops
- Local consultation and training courses
- Planner days

Handling – OBO delivers reliably

With optimised delivery processes:

- Reliable logistics
- Practical transport systems and packaging
- Loading gear handling and disposal concepts

Certification and guarantee

OBO offers safety. Our products fulfil the most important country-specific regulations:

- Conformity (e.g. IEC, VDE, CE, KEMA, KEUR, UL)
- Certification (e.g. DIN EN, DGNB)
- 5-year guarantee for surge protection products
- Guarantee management

Inclusion of the cable routing systems and metal service poles in the service measures

Specifications for safety measures

If there is a fault, touchable metallic parts must not carry voltage. For this reason, it is necessary to carry out appropriate safety measures. These are specified in the currently valid standards. For the creation of cable routing systems the standards DIN EN 50085-1 and DIN EN 50085-2-1 apply, for the installation itself the erector regulations DIN VDE 0100 Part 410 and 540 (safety measure against dangerous shock currents) are applicable.

Different installation types in the European standard

The European standard DIN EN 50085-1 takes different installation types into account, as they are used in different countries within the EU. While only equipotential bonding testing was previously required for installation trunking systems, now the listed component standards also require protective conductor functions. This is because, in some countries, it is possible to route insulated cable in trunking.

All metallic components must be included

DIN EN 50085-1 requires that all the metallic components can be included in the protective measures. The manufacturers must carry out the appropriate tests and document them. OBO installation trunking is also tested and certified by an external testing office – that of the VDE.

Testing the effectiveness by the installation engineers

The erection engineer (installation engineer) must test the effectiveness of the protection measures in accordance with DIN VDE 0100 Part 610 after completion. The tightening torque of the contact screws on the earthing terminals and the proper mounting of the couplings must be ensured.

Continuous protection measures

If the trunking is interrupted at a wall penetration, then continuation of the protective measures is required, as the trunking forms a foreign, conductive part in this case, which spreads through different areas of a building.

With the LKM metallic cable routing trunking, the connection between the cover and base is made without an additional earthing cable. Joint connectors guarantee equipotential bonding between the bases.

Important: Powder-coated metallic covers do not count as mixed construction and are thus not considered as insulating! They should therefore be included in the protection measures. The sheet steel partition is self-contacting. The shielding measure reduces electro-smog and generally achieves improved EMC protection. Protective conductor connections should be created permanently. If there is a change to the system, e.g. for retro-installations, it is important to guarantee the maintenance of the protective functions.

How can I work out the cable volume?

Cable diameter and space required; 1 = diameter in mm, 2 = space required in cm²

An important criterion for the selection of the right trunking size of the underfloor system is the cable volume. As the cables are never packed tightly together or are absolutely parallel, it is not enough to base the volume calculation solely on the cable diameter. A realistic calculation is provided by the formula $(2r)^2$. To simplify your work, we have listed the diameters and space requirements of the most important cable types on this double page. Important: the values are average values, which may vary between manufacturers. Please refer to the manufacturer's specifications for the exact values.

The right choice

The table on the next pages will help you to select the correct trunking size. Besides the usable cross-section of the appropriate trunking, please observe the current DIN/VDE standards for the fill factor and the approved cable heating.

Calculation with the formula $(2r)^2$

The diameter says little about the actual space required by a cable. Calculate: $(2r)^2$. This value reflects the realistic space requirements, including the compartments.

Processing materials with the correct tool

Different materials must be processed differently. Chop saws have proved to be very useful when laying device installation trunking. This allows exact cutting.

For trunking made of PVC and PC/ABS:

- Hand saw, fine-tooth (iron saw)
- Piercing saw with iron or plastic saw blade with fine teeth
- Circular saw with plastic saw blade, 350 mm diameter, 80–108 teeth/inch and 2,800 rpm

For ducts and trunking made of sheet steel and aluminium:

- Ribbon saw with saw ribbon for hard metals
- Circular saw with saw blade for hard metals, 350 mm diameter, 80–108 teeth/inch and 2,800 rpm
- Angle grinder with metal separating disc

Thermal expansion coefficient:

- Steel: 14×10^{-6} 1/K
- Aluminium: 23.1×10^{-6} 1/K
- Hard PVC: 71×10^{-6} 1/K

Take the length expansion of the materials into account

Different materials expand differently and this must be taken into account. The expansion of the materials PVC, steel and aluminium can be calculated using the formula below.

$$\Delta L = L \cdot \alpha \cdot \Delta T$$

L = Length m

α = Thermal expansion co-efficient

ΔT = Temperature change

Examples

At a temperature difference ΔT of 20 °C, the 2,000 mm standard length changes as follows:

- For hard PVC, 2.84 mm
- For steel, 0.56 mm
- For aluminium, 0.924 mm

Perfect interplay for more efficient working

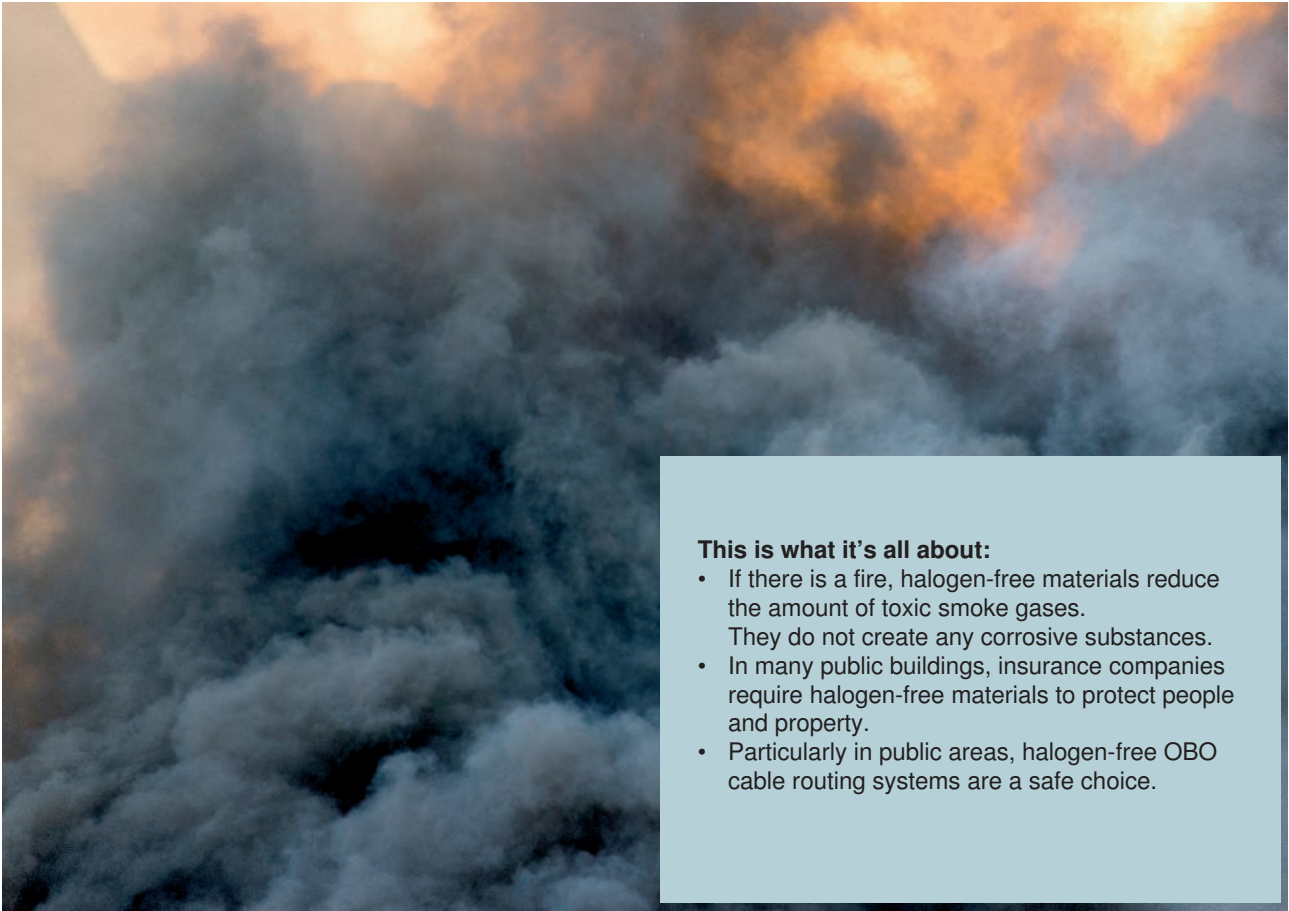

Faster and better installation sequences – this is the aim of both ourselves and the manufacturers of electrical devices. Previously used bolt-firing devices have thus become modern nail guns. With its Pulsa 700E, Spit can offer devices of the highest quality for this area of the electrical industry. Many OBO products can be processed particularly efficiently using the devices. This is proved by tests for mounting cable and device installation trunking, carried out with Spit devices.

Properties of the hard PVC used

| Property | Value | DIN |
|---|---------------------------|-----------------|
| Material designation | PVC-U-E-D-08-04-28 | to DIN 7748 |
| Tensile strength | min. 40 N/mm ² | to DIN 53 455 |
| Crack expansion | min. 85% | to DIN 53 455 |
| Breakdown voltage | min. 20 KV/mm | to DIN 53 481 |
| Surface resistance | min. 1010 Ohm | to DIN 53 455 |
| Shape heat resistance | min. 75 °C | to DIN 53 400/B |
| Temperature resistance in the application | max. 65 °C | |
| Flammability | Level V0 | to UL 94 |

You can find more details in the chapter "Chemical resistance of hard PVC" in the "Additional information" part.

Halogen-free cable routing systems

This is what it's all about:

- If there is a fire, halogen-free materials reduce the amount of toxic smoke gases. They do not create any corrosive substances.
- In many public buildings, insurance companies require halogen-free materials to protect people and property.
- Particularly in public areas, halogen-free OBO cable routing systems are a safe choice.

Low smoke gas production, low corrosion, safe. Halogen-free installation materials belong in any fire protection plan.

Dangerous smoke gases from plastics

Plastics have good insulating properties and can be processed easily. However, during a fire they can create aggressive gases. A danger to people and property.

Heavy smoke creation

Flame-protection agents, based on halogen compounds such as fluorine, iodine, chlorine and bromine, are used to keep the flammability of PVC low. If there is a fire, this safety aspect becomes a dangerous disadvantage: toxic smoke gases, such as carbon dioxide and carbon monoxide, are created. These usually endanger people far faster than flames and heat. For example, in the fire catastrophe at Düsseldorf Airport in 1996 or in the Tauern Tunnel in 1999, considerable quantities of burned plastics contributed to the formation of smoke and hazardous substances. A highly toxic mixture, which can be lethal after just a few breaths.

Protecting existing buildings better

To ensure increased protection of properties in the event of fire and to prevent subsequent fire damage and costs, halogen-free cable routing systems (made of PC/ABS) must be installed in many public buildings. Standard PVC releases corrosive hydrogen chloride gas, which, in conjunction with the moisture of the extinguishing water, produces hydrochloric acid. Hydrochloric acid presents a wealth of risks: On the one hand, it is harmful to health, as it irritates the respiratory passages and, on the other hand, it attacks buildings because it eats its way through metals and, as an electrically conductive substance, can lead to short circuits. This is why all the halogen-free cable routing systems meet the requirements of DIN EN 50085.

**HALOGEN
FREE**

OBO halogen-free cable routing systems protect people, the environment and property. All the products are made from high-quality PC/ABS (polycarbonate/acrylonitrile butadiene styrene). This material is one of the self-extinguishing plastics.

For safe cable routing, OBO offers halogen-free WDKH wall and ceiling trunking and Rapid 80 device installation trunking. Both cable routing systems are available in all the standard dimensions. They are easy to mount, and are stable, are produced to a high level of quality and are dimensionally stable.

The safety aspects

- Low smoke creation
- Low toxicity of the smoke gases
- Scarcely any release of corrosive gases
- Perfectly suitable for public areas

Rapid 80 GKH halogen-free

Rapid 80 device installation trunking allows flexible and quick access to energy and data on the wall. It is primarily used in public facilities and offices.

WDKH halogen-free

OBO wall and ceiling trunking ensures safe cable routing. It can be used as wall or ceiling trunking.

Individual special colours

Plastic trunking

The wide range of standard colours and the many possible special colours mean that it is possible to integrate the colour of the cable routing systems into any office landscape. The plastic cable routing trunking and device installation trunking systems are available in the RAL colours pure white (RAL 9010), light grey (RAL 7035), grey (RAL 7030) and cream (RAL 9001) as standard.

Sheet steel and aluminium trunking

The device installation trunking systems and service poles are made of sheet steel or aluminium and are available in the standard colours pure white, light grey and cream. Powder coating means that all the other RAL colours are possible on sheet steel and aluminium trunking. Alternatively to the RAL standard, both NCS and DB colours can be applied on request.

Colour deviations

Material-dependent colour deviations may occur on PVC trunking and fittings. This is caused by the differences in gloss on each individual surface. They only absorb a part of the light. "Silky matt" painted surfaces and "matted" surfaces on moulded parts have different structures and thus different levels of gloss. Absolute evenness is impossible. With a shiny surface, a colour appears lighter (greater reflection) and, with a matt surface, darker (greater absorption). Measurement of the differences is therefore extremely difficult.

Powder coatings for indoor use

Versatile. Attractive. Robust.

Powdered surface coatings offer a wide range of options. They turn a standard product into an individual solution, whose colour and function are matched exactly to your requirements. The colour and structure ensure a decorative exterior, whilst the coating properties offer high resistance to chemicals, very good corrosion protection and the best possible insulation properties.

|------------------------------------|---|
| PC/ABS | Polycarbonate/acrylonitrile butadiene styrene |
| Temperature resistance: | -30 °C to + 90 °C, briefly up to approx. 105 °C, melting range at approx. 200 °C, thermal decomposition at 300 °C. Material thicknesses of 1.5 mm or more can achieve UL94 V-0. At material thicknesses of 1 mm or more, the glow wire temperature of 960 °C according to IEC 60695-2-12 is achieved. |
| Resistant to: | Mineral acids, organic acids and aqueous salt solutions |
| Conditionally resistant to: | Alkalis, hydrocarbons, aromatics and (in trace form) a series of greases and oils. |

| | |
|--------------------------------|--|
| POM | Polyacetal |
| Temperature resistance: | Permanently up to approx. 100 °C, briefly up to around 130 °C and to around minus 40 °C* |
| Resistant to: | Acetone, ether, petrol, weak acetic acid, benzene, heating oil, oils and greases, toluene. |
| Unstable with: | Methylene chloride, trichloroethylene, hydrochloric acid, nitric acid, sulphuric acid. |
| Risk of stress cracks: | Low |

| | |
|------------------------------------|---|
| PP | Polypropylene |
| Temperature resistance: | Permanently up to approx. 90 °C, briefly up to around 110 °C, and to around minus 30 °C. Chemical resistance generally as for polyethylene. |
| Resistant to: | Alkalis and inorganic acids. |
| Unstable with: | Chlorine, hydrocarbons, oxidising acids. |
| Conditionally resistant to: | Acetone, organic acids, petrol, benzene, diesel oil, most oils. |
| Risk of stress cracks: | Low, only with some acids such as chromic acid, hydrofluoric acid and hydrochloric acid, as well as nitrogen oxide. |

| | |
|------------------------------------|---|
| PS | Polystyrene |
| Temperature resistance: | Because of its relatively high sensitivity to the effects of chemicals, its use is not recommended at temperatures above normal room temperature, about 25 °C. Resistance to cold: to about minus 40 °C*. |
| Resistant to: | Alkalis, most acids, alcohol. |
| Unstable with: | Butyric acid, concentrated nitric acid, concentrated acetic acid, acetone, ether, petrol and benzene, solvents for paints and lacquers, chlorine, diesel fuel. |
| Conditionally resistant to: | Oils and greases. |
| Risk of stress cracks: | Relatively high. Stress cracks can be caused by, among other things, acetone, ether, petrol, cyclohexane, heptane, methanol, propanol and the softeners of some mixes used in PVC cables. |

| PVC | Polyvinyl chloride |
|--|--|
| Temperature resistance: | Permanently up to approx. 65 °C, briefly up to around 75 °C and to around minus 30 °C. |
| Resistant to: | Weak acids, alkalis, oils and greases, petrol |
| Unstable with: | Strong acids, benzene, acetone, iodine, toluene, trichloroethylene. |
| Risk of stress cracks: | Low, only with some solvents such as benzene and acetone. |
| Material designation according to DIN 7748: | PVC-U-E-D-080-04-28 |
| Tensile strength to DIN 53 455: | Min. 40 N/mm ² |
| Elongation at tear according to DIN 53 455: | Min. 65% |
| Impact resistance according to DIN 53 481: | Min. 20 KV/mm |
| Surface resistance according to DIN 5 3 482: | Min. 10 10 |
| Thermoforming resistance according to DIN 53 460/B: | Min. 75 °C |
| Flammability according to UL 94: | Level V0 |
| Fire behaviour according to EN 13501-1 | B-s3, d0 |

The minus values apply only for parts in the idle condition with no severe impact stress. There is no plastic that is resistant to every chemical. The agents listed are only a small selection. Plastic parts are especially at risk in the presence of chemicals and high temperatures. Stress cracks may occur. If in doubt, please consult us and/or ask for a detailed chemical resistance table. Stress crack formation: Stress cracks may occur if plastic parts under

tension are exposed to chemicals at the same time. Parts made of polystyrene and polyethylene are particularly susceptible. Stress cracks may even be caused by agents to which the plastic in question is resistant in the absence of stress. Typical examples of parts under constant stress when used as intended: grip clips, intermediate connectors of cable glands, ribbon clips.

System description

WDK trunking is particularly suited for areas in which appearance is not a key factor – for example, workshops, production facilities and residential cellars. Devices of width 60110 to 60210 can be installed in the PVC wall and ceiling trunking. All the standard devices of all

manufacturers fit the device installation sockets. A wide range of fittings guarantees solutions for all kinds of applications. The trunking, made of halogen-free material, guarantees compliance with the highest safety standards.

Mounting aid

Mounting of mini trunking

Remove the protective film. Stick the trunking to a dust-free, adherent substrate.

Cut mini trunking

The OBO shears can be used to create an exact straight cut for the WDK trunking. The shears can be used for trunking sizes of up to 25 x 45 mm.

WDK for workshops

Together with accessory mounting boxes, WDK cable trunking of 60 mm trunking height can be used as device installation trunking.

WDK with nail strip

The nail strip means that WDK trunking can be mounted with steel nails. At the same time, it prevents nail damage to the cables. Of course, the nail strip can also be used as a separating retainer for routing different voltage levels.

Mounting of cover clip

The cover clip is locked into the cover contour. To insert the cables, move it forward through 30°. The clip stabilises the WDK trunking and keeps the cables in the trunking.

Internal corner cover mounting

The cover fitting is placed over the mounted WDK trunking and locks into the cover contour.

External corner hood mounting

The bases of the WDK trunking are mounted on the wall up to the corner.

External corner hood mounting

After the cables have been routed, the external hood fitting is placed on the bases.

Mounting of accessory mounting box

The accessory mounting box is locked onto the floor connectors.

Mounting of accessory mounting box

Then the accessory mounting box is fixed to the WDK trunking using the bolt located in the base.

Mounting with nail device

Mounting of the cable trunking is fast and efficient with a Spit nail device.

RK universal trunking

The universal trunking hides the cables inserted in distributors and counter cabinets.

RK clip mounting

The clips (OBO Quick Clip Pg16) are mounted using knock-in anchors on the left and right of the distributor cabinets. They are contained in the scope of delivery.

RK end piece mounting

The end pieces are fastened by locking them in the clips.

Cut RK cover

The covers are cut to the appropriate length using a standard coping saw.

RK cover mounting

Simply lock the cover in the end pieces.

RK front cover mounting

Attach the front cover to the cover clips.

RK complete mounting

The universal trunking allows tidy laying, even if a lot of cables need to be hidden.

System description

LKM metal cable routing trunking has two areas of application. The stable system for the routing and protection of cables is used in the field of machines and systems. The completed system allows simple installation at a later date, also with pre-terminated connectors, offering reliable protection against mechanical loads and

soiling. The LKM cable routing trunking of type LKM 20030 and 60100 are also tested as a cable-specific routing type for the maintenance of electrical function according to DIN 4102 Part 12.

Mounting aid

Machines application area

In the area of machines, the LKM metal cable trunking is used to provide additional protection for the cables.

Corridor, stairwell application area

The stable LKM metal cable trunking can be used anywhere, in which cables require mechanical protection.

Machine trunking mounting

Screw the LKM metal cable trunking to the machine, for example, using cylinder head bolts of type 341.

Wall trunking mounting

Knock-in anchors of type 910/SD can be used to fasten the LKM trunking directly on the wall.

Installation of internal corner

As with the LKM trunking, the fittings are mounted at the appropriate points.

Installation of joint connectors

After installing the LKM trunking, lock the joint connector into the parts to be connected from inside. This guarantees the equipotential bonding between these two parts.

Installation of partition

Insert the partition into the straps located on the floor. This guarantees equipotential bonding without any additional aids.

Installation of cable fixing holder

The cable bracket is mounted using the trunking fastening screw. The cables can be held using cable ties, type 565.

Installation of duct clamp

The duct clamp is placed on the loop perforation in the base and then locked into the cover contour. If a partition wall is also installed, the partition wall must be separated into sections.

Equipotential bonding

Equipotential bonding is guaranteed between the cover and the base through the special cover contour. The LKM trunking is earthed using the connection strap located in the base.

Installation of edge protection ring

Place the edge protection ring on the open ends of the LKM trunking. It prevents damage to the cables within.

System overview

For all applications in single or multiple-occupier dwellings, whether a new building or renovation:

- The product range comprises the dimensions 20 x 50 mm, 20 x 70 mm and 20 x 110 mm
- Connection solutions for all standard devices in support ring and support clamp design
- Length of the standard profiles 2 m
- Versions available in RAL 9010 (trunking width: 50, 70 and 110 mm)
- Matching accessories to maintain the protection classes

Mounting aid

Device support for universal devices

Apply the device support to the top of the base and screw to the wall.

Connect and screw on the holder.

Select the adapter plate according to the height of the skirting board. No adapter plate is available for SL 20 x 110.

Clip the front plate onto the cover.

Mount the connection cover.

Mounted device support.

Mounting aid

Device support with pre-terminated double socket

At trunking heights of 50 mm, apply the device support to the mounted skirting trunking base in such a way that the two struts serve as spacers. Then, drill the hole and screw to the wall (image without mounted socket base).

Connect the device support.

Place the device support directly on the base. When using the 70 mm-high SL trunking, break out the two bars (spacers).

When using the SL duct of 50 mm duct height before mounting the device tank, insert the supplied adapter plate on both sides.

Hang the device tank in the SL base.

Place the device panel, including the screw, in the opening of the device tank and screw it tight.

After mounting, an electrical test must be performed by an authorised electrical engineer.

Mounting aid

Device support for devices with support clamp

Apply the device support to the top of the base and screw to the wall.

Connect and screw on the holder.

Select the adapter plate according to the height of the skirting board. No adapter plate is available for SL 20 x 110.

Clip the front plate onto the cover.

Mount the connection cover.

Mounted device support.

System overview

Base perforation

Bases:

The base perforation (slots) simplifies mounting.

Covers:

Either with or without sealing lip.

Heating pipes:

Suitable up to 20 mm external diameter. Fastening through the heating pipe support, which is engaged in the base.

Internal/external corners:

The bases must be given mitre cuts to exclude heat being drawn away (from the heating chamber into the electrical chamber). In the case of poor structural conditions (uneven walls, etc.), we recommend closing off any gap that may appear when separating the chambers with silicone.

End pieces:

Adhesion must take place for VDE-compliant mounting.

Heating temperatures:

The RAUDUO system is designed for a flow temperature of 70 °C and a return temperature of 55 °C (according to the VDE information report). With a flow temperature of up to 90 °C and a return temperature of up to 70 °C, the VDE report requires the device tank insulation to be replaced with "90 °C insulation foam", item no. 6132175.

Mounting of RAUDUO device tank with double socket

Mounting steps

1

Mounting requirement
a) Mounted trunking base
b) Installed heating system

2

Insert the device tank insulation in the trunking base (at flow temperatures over 70 °C, the solid foam variant, item no. 6132175 must be used!).

3

Position the device tank (centrally to the insulation). Then, draw on the drill holes, drill the holes and screw the device support tight.

4

Engage the potential separation plate in the trunking base. The insulation must protrude evenly on the left and the right.

5

Place the cables separately in the clamps and connect the socket and other connection devices. Close both trunking chambers (electrical and heating chambers) using the shared cover. The trunking covers abut the grooves of the potential separation plate on the right and left.

6

Mount the device tank with cover on the base and close with the cover.

Precise measurements and tested quality

An exceptionally large range of products in the usual high quality: Wiring trunking ensures tidy wiring in a switchgear cabinet. All the trunking is made from lead-free material. And, for optimum safety, a selection of halogen-free trunking is available from our range.

Four systems are available for professional wiring installations, which can fulfil any requirements the switchgear cabinet constructor might have. A soft, burr-free slot and rounded tabs make the installation easier and also prevent injuries. Upon request, we can also offer special designs.

The LK4 and LK4/N as well as the LKV and LKV/N trunking systems have exactly predetermined points for easy breaking-out of the side retainers. All the types have, depending on their size, single or dual track perforation to their base. Tapering in the side slots of the LK4/N and LKV/N types prevents the cables from falling out.

LK4 – nominal dimensions are internal dimensions
LKV – only external dimensions

LK4 and LK4/N

With the LK4 and LK4/N systems, OBO can offer a classic wiring trunking with 21 established metric dimensions from 15 x 15 mm to 80 x 120 mm. Precise processing enables simple attaching and detaching of the cover while, at the same time, ensuring a firm fit.

LKV and LKV/N

The LKV and LKV/N systems are termed DIN trunking, as their dimensions correspond to the old DIN standard 43659. Seventeen different dimensions from 25 x 25 mm to 100 x 100 mm are available.

Certified

The wiring trunking is VDE-tested and UL-listed (UL file E301798).

HALOGEN FREE

In the event of fire:

- Low toxicity of the smoke gases
- Scarcely any release of corrosive gases

LK4H

The LK4H wiring trunking is also available as a halogen-free version. The halogen-free version is available in dimensions from 30 x 30 mm to 100 x 100 mm and can fulfil any size requirements.

LKV/H

The LKV/H wiring trunking is halogen-free and available in eight different sizes from 50 x 37.5 mm to 75 x 125 mm.

Modular system

Wiring trunking

OBO wiring trunking stands out through a wide range of benefits which have long proven their worth in switchgear cabinet construction. Even in continuous operation, it guarantees secure connections and the reliable function of the electrical infrastructure.

Special solutions

The starting dimension of the base perforation can be adjusted variably

- Available without base perforation
- Special lengths
- Special colours

| | |
|---|--|
| 1 | Stable trunking with high-quality thicknesses |
| 2 | Exact predetermined breaking points in the strut and base area |
| 3 | Soft, burr-free slot, rounded tabs |
| 4 | Absolute dimensional accuracy of the side perforation and base perforation |
| 5 | Cut edges rounded and deburred in the closing area |
| 6 | Secure positioning of the covers through optimum closing contours |
| 7 | Wire retaining lug, allowing wiring without wire retaining brackets and preventing previously run-out wires from falling out |

All the trunking systems correspond to the requirements of EN 50085-2-3 and are UL-listed.

Mounting benefits

Mounting of the wiring trunking

The wiring trunking is fastened to the mounting plate of the switchgear cabinet using spreading rivets. The spreading rivets are installed using the plastic riveting tool.

Spacer mounting

Through the mounting on spacers, it is possible to install the wiring trunking with a distance to the mounting plate.

Wire retainers

The wire retainers can be adjusted according to the trunking width. To do this, simply break off the wire retainer at the predetermined breaking points. This means that just one wire retainer is necessary for any trunking width.

Wire retainer mounting

The wire retainer is inserted into the side slot of the wiring trunking. This simplifies cable installation and keeps the cables in place in the wiring trunking. It also guarantees easy attachment of the cover. If installations are required at a later date, then, when the cover is removed, the cables are held in the trunking and do not fall out.

Base perforation

Single and dual-track base perforation to EN 50085-2-3 enable precise work.

Identification plate

Sticker as an identification plate to attach onto wiring trunking in switchgear cabinets with self-protected power circuits.

Hole patterns and dimensions

All the VK and VKH wiring trunking always start and finish – with regards to one delivery length (2,000 mm) – with half a small fastening hole (4.5 x 8 mm).
